

In a recent IDG survey, CIOs to engineers laid out their biggest challenges with networking.

The biggest obstacles are access, control, and connectivity of devices and resources on their network.

64% struggle with provisioning network access

74% struggle with network access and control

66% have trouble with machine quarantine and revocation

68% struggle with connectivity across networks

76% see security patches and tighter control as a source of complexity

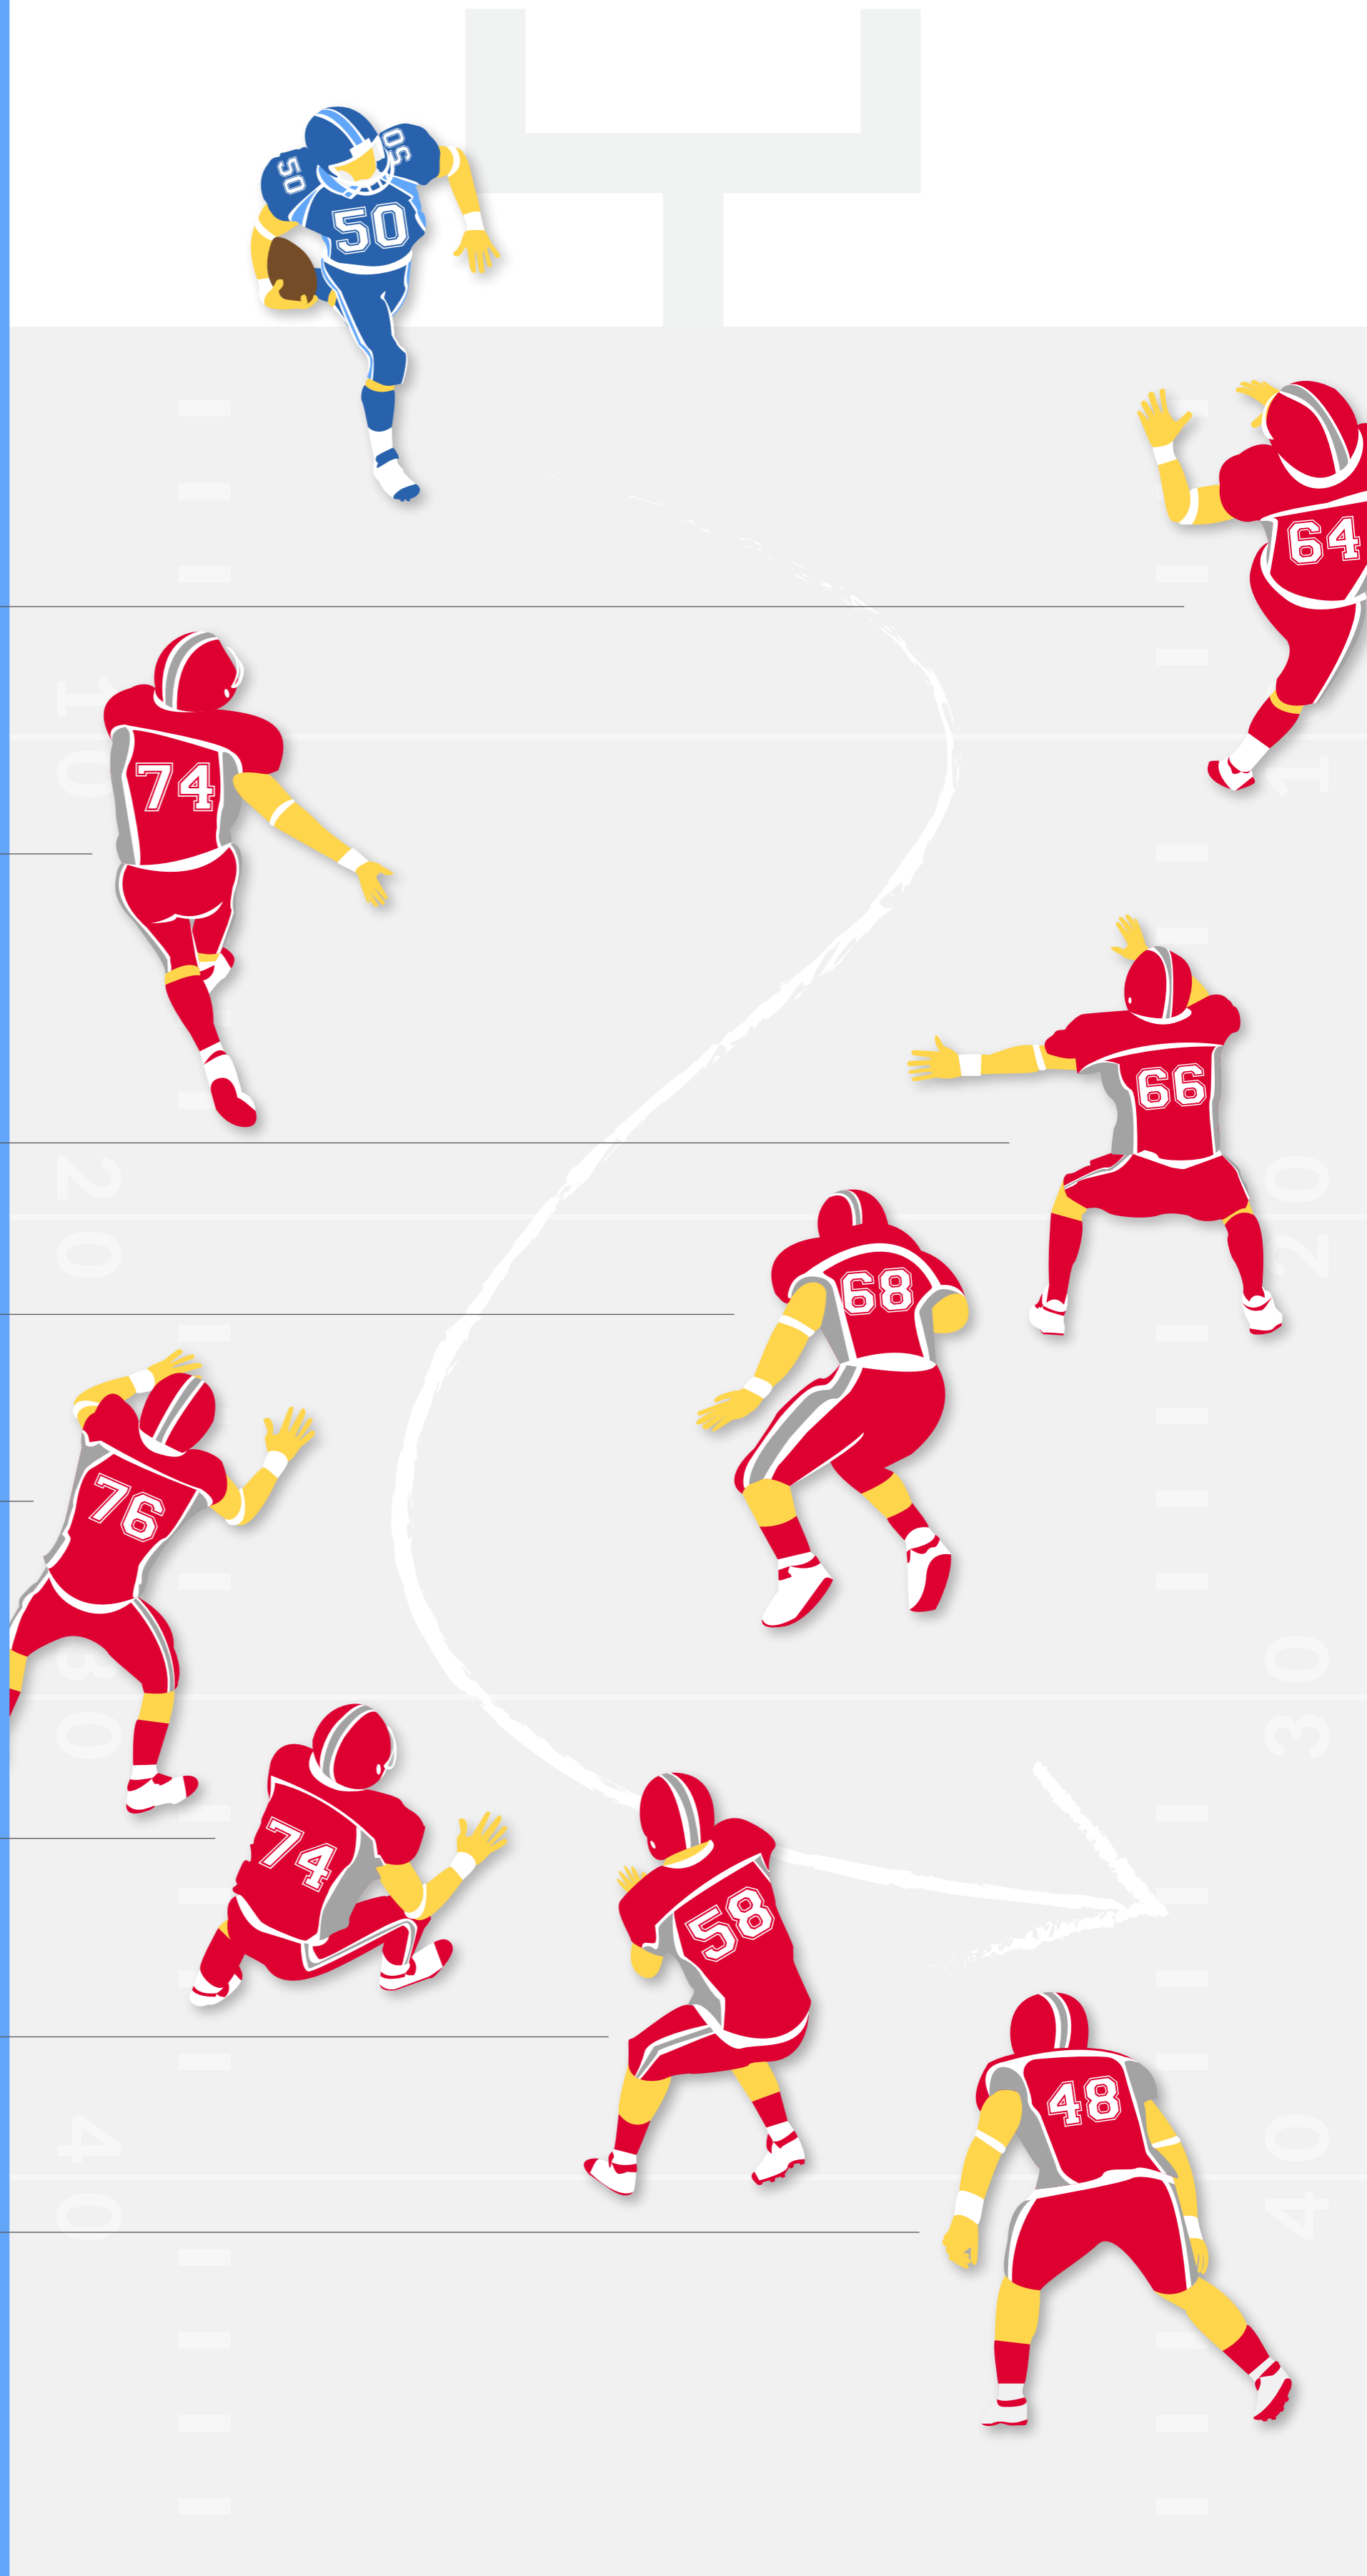

74% see IoT as a driver of network and security complexity

58% find traditional tools (VPNs, NACs) to be impractical and ineffective for Industrial IoT

48% believe its impossible to have optimal security and operational efficiency

Increased complexity and more advanced threats are driving costs up, well beyond in-house capabilities and resources

## What's Stopping You From Tackling Your Secure Networking Goals?

With Identity-Defined Networking (IDN) you've got the tools to instantly build an available, secure, and simple overlay network—helping you to achieve your goals and become the star of your networking team.

50% productivity improvement of network and security teams

97% decrease in network and resource provisioning time

90% reduction in network attack surface

Tempered Networks can help you score all of these benefits and make you the company MVP. Get in touch and let's kick off your next project!

## Secure Networking Touchdown!
